

Optimize Report Distribution and Analysis with Construction Hive

Construction Hive is a cloud based platform providing applications for the distribution and analysis of information amongst construction industry participants (such as construction companies, construction material producers, testing consultant laboratories and government agencies). It provides a centralized repository of documents and data (testing and inspection) that is then available for analytical reporting and integration.

It has been successfully used for large (>\$1B) infrastructure projects in the USA and Australia by leading private and public corporations, and currently has millions of documents under storage and more than 15,000 registered users. It is engineered to cope with large loads and regularly receives between 50,000 and 100,000 documents per month.

Efficiently distribute documents

Access and analyze data

Integrate with other systems

Store data long term

“ Combining QESTLab with Spectra QEST’s Construction Hive platform has provided us with improved turnaround times on report publishing. Our clients can gain instant access to new reports, as well as being able to easily search for and locate all previous reports.”

Linus Vitkus, P.E., G.E.,
Vice President, Structures Division, Twining, Inc.

“ With the help of the entire Spectra QEST team we are reaching our goals of improving our Quality, Efficiency, Standardization, and Technology and building a strong foundation that can support profitable growth for years to come.”

Marshall Hammack,
CFO, Professional Service Industries, Inc.
